NO OIL

Solvent Extractor For Greasy And Ink Stains From Stones

Description

NO OIL is a product operating by extraction and considering that natural stones do not always have a well defined and uniform structure, it is not possible to obtain good results very often.

Directions

Shake the tin well before use. Pour directly spreading the liquid all over the stain. Allow to dry then remove by means of a damp sponge or vacuum cleaner. Repeat this operation until the stain will disappear. If good results on ink or marker stains are not reached use NO MAC. Spread the product evenly on the surface, allow it to act for several minutes then rinse well with water.

Important : Always make preliminary trials to test the stone resistance to the chemical product.

Fortuitous Leakage And Waste Disposal Method

In case material is released or spilled, clean up most of the product. Store the residue in tank, then send to an appropriate water conditioner or call for a specialized company.

Coverage	: N/A
Storage	: Keep the container closed and store in a cool and dry place.
Shelf life	: 1 – 2 years in original sealed packing.
Packing	: 1 lt. bottle (12 per carton)

Technical Data

Appearance	: Milk white slurry
Colour	: Milk white
pH (5% solution)	: N.R.
Specific gravity (20°C)	: 1,18 – 1,22 gr./cc
